 - Address Verification
 - Real Estate Valuation

Authentication + Verification

Business Apps

- SMS Text Service
- Accounting Software
- API Management
- Data Warehouse

MuleSoft Security + API Governance

Securing your integration platform

Security is one of the most overlooked areas of our clients' MuleSoft platforms. A robust security review is critical for:

- Identifying vulnerabilities and preparing corrective actions
- Preventing data breaches by finding and remedying risks
- Ensure compliance with regulatory frameworks and legislation, both of which are critical within the financial services industry
- Avoiding reputational harm and maintaining stakeholder trust
- Ensuring that data remains secure when being transmitted to external parties, such as FinTechs

Accutive FinTech's partner company, Accutive Security has been providing cybersecurity solutions to banks + credit unions for over 14+ years. At Accutive, we draw upon our decades of cybersecurity expertise to ensure the security of your platforms, such as MuleSoft.

Benefits of API Governance for your organization

With effective API Governance you can:

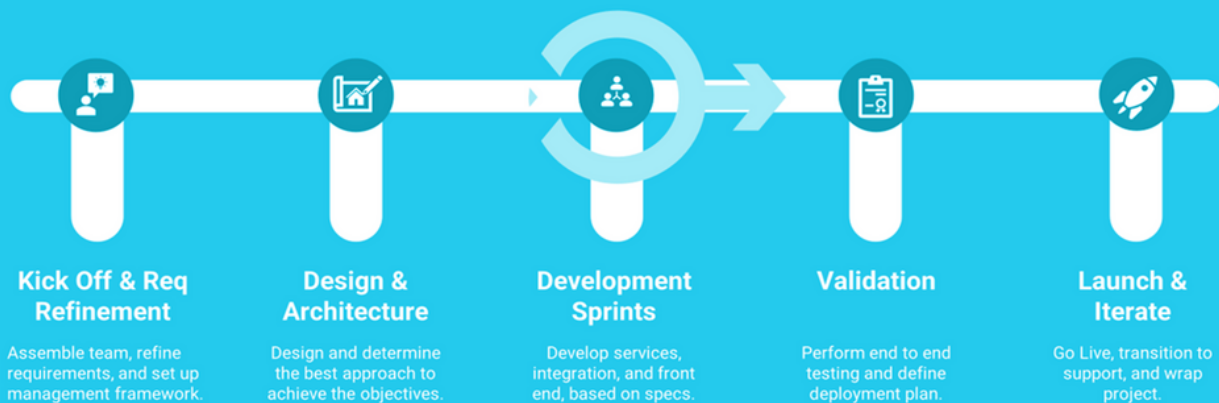

- Improve your organization's API quality by finding conformance issues in published API definitions and take steps to resolve them.
- Share governance best practices by publishing governance rulesets in Anypoint Exchange to share with other developers.
- Apply consistent governance rulesets at design time in Anypoint API Designer.
- Enforce governance within your DevOps organization by automating the application of standards to your API contracts and definitions within your CI/CD pipeline.

Project Delivery Methodology

Accutive Project Delivery Framework

PROJECT DELIVERY FRAMEWORK

For almost 15 years, Accutive has partnered with leading banking, insurance and technology companies to implement innovative solutions and reduce operational cost.

Accutive

5

Quality First Approach

Low Dev to QA Ratio

We take quality seriously - so you may see more QA resources than you're used to when working with Accutive!

Detailed Requirement Analysis

Minimize late changes and issues through clear understanding of requirements before development begins.

Zero Defect Mentality

We know that defect minimization makes your life easier!

The Accutive Approach

Extend your team

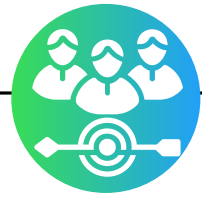

Broad + Deep Expertise

We employ former
bankers and Temenos
developers

Quality First Approach

Extremely low, industry-
leading defect rates.
Focus on business
process optimization.

Client Focused

Committed to providing
incredible service that
goes above and beyond.

About Accutive FinTech
